### **DETAILED ACTION**

This Office action is in response to the applicant's amendment filed on 3/3/05.

#### ***Claim Objections***

Claim 13 is objected to because of the following informalities: the cited limitation "the caster type" does not have antecedent basis. Appropriate correction is required.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10, and 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Wilson (US 2,771,937).

In regard claims 1, 2, Wilson teaches a folding platform structure comprising a first platform 2, and a second platform panel 3. Each of the platform panels having deck 10 and support frame 9, and the first platform panel is pivotally connected to a second platform panel at 29, the second platform panel further being pivotally connected to a base assembly at 62 wherein when the first and second platform panels are in a position for use substantially parallel to a ground surface (see fig. 2) the second platform panel supported by a plurality of engaging support and by the second platform panel; and wherein when the first and second platform panels are pivoted to a storage position substantially perpendicular to the ground surface the respective upper surface of the first and second platform panels face one another (figures 2 and 5).

Art Unit: 3635

In regard claims 3-7, Wilson teaches the claimed invention as stated wherein further teaches a lock member 33 includes a catch for engaging a pin on the opposite frame member serves as a first platform panel restraint/lock for disengaged prior to folding and unfolding and engaged (see col. 3), a second platform panel restraints 34 prevent the second platform panel from being pivoted to a position substantially parallel to the ground surface if the first platform panel is still in the storage position and connected to the first platform panel and engaged the base assembly via frame members 28 (fig. 1).

In regard claims 12-14, Wilson teaches the claimed invention as stated wherein further comprising a caster assembly 23 including wheels, and a lock stop 33.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8-10, and 15-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilson in view Wagner.

In regard claims 8-10, Wilson teaches the claimed invention as stated except for the legs are having adjustable in length, which comprise telescopic leg assemblies.

Wagner teaches folding stage including a ground engaging supports 28 having inner telescoping legs 80 extending outward from the upper outer legs 82 thus are adjustable in length (fig. 1). At the time of the invention, it would have been obvious to

Art Unit: 3635

one having ordinary skill in the art to modify Wilson's leg assembly for Wagner leg assembly, which including telescoping legs for adjusting in length. The motivation for doing so would have been to raise or lower table for intended use.

In regard claim 15-20 method of assembly, Wilson and Wagner teach the structural elements for the foldable stage as set forth. However, Wilson and Wagner do not teach expressly the method steps from storage position to utilizing position as claimed by the applicant, examiner considers this to be the obvious method step of setting up device because in utilizing a foldable stage, one must obviously roll to and position on applicable place, disengage platform panels retainers, permit platform panels straight, lower ground engaging members or legs and adjust desirable highs. Wilson and Wagner would be motivated to follow these steps to facilitate assembly of a foldable stage.

#### ***Allowable Subject Matter***

Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Response to Arguments***

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.
